EDUCATION

University of South Carolina   Columbia, South Carolina
• Bachelor of Science in Computer Science, Minor in Mathematics
2015- 2018

WORK EXPERIENCE

South Carolina Department of Health and Environmental Services (SCDHEC)   Columbia, South Carolina
Developer
2018 -Present

- Optimized financial system code base to decrease load times by 97%, enabling business users to only need one Citrix instance instead of the previous eight+. Decreased server load by an estimated 86%.
- Implemented/supported pipeline to provide physical Covid19 test results to patients via postal service.
- Lead a team to develop a web-based solution for SC vaccine providers to report daily Covid19 vaccine data. This data went directly to the governor and emergency response team for the state.
- Created LiquidOffice forms and process flow that converted user input onto a state mandated pdf with relevant travel info for reimbursement to replace our legacy Delphi system.
- Decoded encrypted data from other state agencies and updated databases with parsed data.
- Implemented a recovery interface and database backup for critical financial systems.
- Resolved user tickets including account management, system changes and data requests.
- Developed various C# utility programs and batch jobs. • Worked with SQL/DB2 databases extensively.

Walgreens   Lexington, South Carolina
Senior Certified Pharmacy Technician
2007 - 2018

- Filled hundreds of prescriptions accurately and efficiently in a fast-paced environment daily.
- Setup and assisted with running immunization clinics with local employers.
- Taught employees learning materials related to PTCB certification in a classroom type setting.
- Trained coworkers on functions of pharmacy.
- Managed workflow of 10+ employees. • Scheduled employees for a 24-hour retail environment.

PROJECTS

Covid19Fetcher

- A java AWS Lambda project that triggers off a CloudWatch event to fetch up to date Covid19 data. Used S3 to store code, and topic/subscriber format to send an email with the results.
- Developed with Java, AWS Lambda, S3 • github.com/afraznein/Covid19Fetcher

GNTL_BOT

- Modified an open-source bot that awaits async commands, fetching info for users on a Discord server.
- Developed with C#, Discord API, WarcraftLogs API. • github.com/afraznein/GNTL_BOT

LANGUAGES and TECHNOLOGIES

- C#, Java, Spring, Javascript/HTML/CSS, ASP.NET MVC, LiquidOffice, Node
- AQT, AWS(Cloudwatch, Lambda, S3, SNS), DB2/SQL, Git/SVN, Intellij, SQL Server, VS, VS Code
